

MONGO DB: REPORT 4

PROJECTION & LIMIT :

- Use the projection document as the second argument to the find method.
- Include field names with a value of 1 to specify fields to be returned.
- Omit fields or set them to 0 to exclude them from the results.
- Given a Collection you want to FILTER a subset of attributes. That is the place Projection is used.

To get selected attributes:

```
test> db.stu.find({}, {name:1, age:1}).count();  
500  
test>
```

Ignoring attributes:

```
test> db.stu.find({}, {_id:0}).count();  
500  
test>
```

RETRIEVING SPECIFIC FIELDS FROM NESTED OBJECTS:

The \$slice operator in MongoDB is used to select the subset of the array. It is particularly useful when you have large arrays stored in your documents and you only need to retrieve certain elements, optimizing data retrieval and reducing overhead.

```
test> db.stu.find({}, {
...   name:1,
...   courses:{$slice:1}
... });

BENEFITS OF PROJECTION :

- Performance Improvement
- Optimized resource usage
- Simplifies data handling
- Better Index utilization
- Flexible Query Results

LIMIT :

\$limit takes a number 'n' and results the first n resulting documents.

```
test> db.stu.find({}, {_id:0}).limit(5);

  {
    name: 'Student 948',
    age: 19,

    blood_group: 'O+',
    is_hotel_resident: true
